

Containerizing Applications, Existing and New

Scott Collier (@collier_s)
Consulting Software Engineer

Tommy Hughes (@tommyhughes)
Principal Engineer

May 2 & 3rd 2017

Dusty Mabe (@dustymabe)
Software Container Engineer

Langdon White (@langdon)
Platform Architect

lab: <https://github.com/dustymabe/summit-2017-container-lab/>

Lab 1

If you are new to Docker, or having been using it a bit, this lab will provide an overview and refresher. We also include some handy tips to make things easier.

Lab 2

Whenever you read about Docker, you hear “1 service = 1 container.” While this is a good practice, it doesn’t have to be the only answer. We will take a look at a monolithic application and how it should be containerized.

Lab 3

We will take a monolithic application and deconstruct it into services. Each service will be provided by its own container. We will also highlight the tradeoffs we make.

Lab 4

When deconstructing an application, you quickly realize that orchestration of services is fundamental. In this lab, we will introduce OpenShift & Kubernetes as an orchestration tool for containers.

Bonus Lab 5!

How can you make a repeatable template for your basic application? We also introduce the OpenShift Web Console.

Lab Architecture

RHEL 7 Workstation

minishift vm (from the CDK)

minishift

master

node

Docker

Atomic Host

OpenShift

master

node

Docker

atomic-host.example.com

Tips

Laptops: redhat

Workstation VM: student/student

Lab: <https://github.com/dustymabe/summit-2017-container-lab/>

- Go to View | Scale Display and check the box “Auto resize VM with window”
- Cutting and pasting from the pdf can be weird across multiple lines.. Make sure to c/p carefully. If it bites you a lot, take a look at the markdown files in `~/summit-2017-container-lab/labs/` or the github repo below.
- The getlab script will have no output
- Don't forget the “s” in https when going to the openshift console
- Ignore “as the vagrant user” on page 8
- If docker commands issue certificate errors, please let us know and run
“minishift stop && minishift start --skip-registration”
